

HARRY PHALOSA TELAUMBANUA

Full-Stack Web Developer

Malang, East Java, Indonesia | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE SUMMARY

Informatics Engineering student (6th semester) at Brawijaya University with a strong foundation in Full-Stack Web Development, modern JavaScript ecosystems (Node.js, React), and cloud databases. Adept at building scalable digital solutions with seamless AI integration. Bringing hands-on experience from community digital transformation projects, I am ready to leverage my technical expertise and problem-solving skills to drive impactful digital solutions in an intensive IT internship environment.

CORE COMPETENCIES

- Languages: JavaScript (ES6+), TypeScript, Java, PHP, Python.
 - Frontend: React.js, Vite, Tailwind CSS, Zustand, React Query.
 - Backend: Node.js, Express.js, Java Spring Boot, Laravel.
 - Databases: PostgreSQL, MySQL, Supabase, Prisma ORM.
 - Tools & Others: Git, RESTful API Design, Microservices, AWS Data Engineering, AI Integration (Google Gemini).
-

FEATURED PROJECTS

1. StepWise – AI-Powered Learning Roadmap & Career Advisor

Tech Stack: React 19, TypeScript, Node.js, Express 5, Prisma ORM, PostgreSQL, Google Gemini AI, Node-cron.

- **Description:** A full-stack intelligent educational platform that generates adaptive IT career roadmaps based on dynamic user assessments and automated CV parsing.
- **My Contribution:** Solo Developer – Built end-to-end architecture including frontend state management, backend APIs, and AI integration.
- **Key Features & Metrics:**
 - Engineered an AI-powered CV parser using Google Gemini AI and PDF-parse to extract skills and bypass redundant learning modules.
 - Implemented background evaluation jobs using node-cron and Nodemailer for automated user progress tracking and email notifications.
 - Developed a scalable relational database schema via Prisma ORM, ensuring type-safe database queries.
- **Link:** <https://github.com/yosiarel/stepwise>

2. CareerPath Ecosystem – ML-Driven Career Recommendation

Tech Stack: Node.js, Express.js, Python, PostgreSQL, Supabase.

- **Description:** An educational backend service that analyzes user profiles to dynamically generate personalized IT learning curriculums using Machine Learning models.
- **My Contribution:** Backend API, database schema, and ML script integration. (Team Project - responsible for backend architecture and Supabase RLS).
- **Key Features & Metrics:**
 - Architected a REST API in Node.js that securely communicates with a Python-based prediction script (predict.py) for ML inferences.

<https://github.com/gitaimiee/careerpath-ai>

3. Kasir BUMDes Baturetno – Digital POS System (Community Project)

Tech Stack: Laravel (PHP 8.3), MySQL, Tailwind CSS.

- **Description:** A fully functional Point of Sale (POS) and inventory management system engineered during the Mahasiswa Membangun Desa (MMD) program to modernize village-owned enterprises (BUMDes).
- **My Contribution:** Solo Developer – Full-stack development, database design, and local network deployment.
- **Key Features & Metrics:**
 - Developed a transactional POS interface featuring real-time cart management and stock adjustments.
 - Integrated hardware support for 58mm Thermal Printers and QR Code Scanners over a local network server.
 - Deployed system successfully, migrating the village officials from manual ledgers to a digital inventory platform.
- **Link:** <https://github.com/HarryPhalosa01/Kasir-BUMDes-Baturetno>

4. Qoin E-Commerce Platform

Tech Stack: Next.js, TypeScript, Prisma, Supabase, JWT.

- **Description:** A comprehensive e-commerce solution with a dynamic product catalog, cart management, and secure authentication.
- **My Contribution:** Full-Stack Development.
- **Key Features & Metrics:**
 - Engineered secure user authentication (JWT/bcrypt).
 - Designed a real-time database schema for shopping cart states using Prisma and Supabase.

ADDITIONAL PROJECTS

1. Enterprise Order Management System

Tech Stack: Java, Spring Boot, MySQL.

- **Description:** An integrated B2B/B2C order management REST API simulating microservices architecture (inventory, shipping, transactions).
- **My Contribution:** Backend API, exception handling, and database relations. (Team Project - responsible for backend & Spring Boot architecture).
- **Features:** Implemented global exception handling, transactional order processing (reserve/release stock), and robust CRUD operations.
